

# Daniel Enis

(318) 216-2017 | danielenis01@gmail.com | danielenis.com | linkedin.com/in/daniel-enis

## EDUCATION

### University of Texas at Dallas

*Bachelor of Science in Computer Science*

- Relevant Coursework: Unix Systems Programming, Linear Algebra, Data Structures and Algorithms, Computer Science 1 and 2

Richardson, TX

*Expected May 2028*

## TECHNICAL SKILLS

**Proficient:** Python, JavaScript, TypeScript, React.js, LLMs, REST APIs, Next.js, Node.js, Flask, FastAPI, MongoDB, Firebase, Vercel

**Experienced:** C++, Java, HTML, CSS, Docker, AWS, Azure, Version Control Systems (Git, GitHub), Cursor, Claude Code, Copilot, Excel, TensorFlow, PyTorch, LangChain, LangGraph, RAG

**Learning:** SQL, OAuth, Kafka, Vector DBs, Spring Boot, Kubernetes, Ollama, Datadog, React Native, PostgreSQL

## EXPERIENCE

### Dallas Formula Racing – SAE Software Division

*Software Team Member*

- Developed REST API endpoints via Azure Functions for the "Star-stream" project to process metric data from racing cars stored in Azure Event Hubs
- Implemented data formatting and transmission systems to send processed data to MongoDB
- Coordinated task timelines and milestones with a cross-functional software team to deliver weekly project deliverables on schedule
- Utilized Loki for logging functionality and monitoring system performance

Richardson, TX

*Jan 2025 – May 2025*

### Bricks 4 Kidz

*Instructor*

- Instructed summer camp classes introducing elementary STEM concepts using hands-on projects
- Designed and facilitated activities that encourage collaborative, problem-solving skills in young learners
- Managed weekly lesson plans and task schedules for up to 20 students per session, ensuring on-time completion of hands-on builds
- Utilized block-based coding languages to teach early programming skills

Shreveport, LA

*Summers 2022 – 2025*

## PROJECTS

### Commut.r | 1st Place – HackAI

Mar 2026

- Built a voice-driven AI commuter assistant using React, Python/Flask, and Node.js that guides UTD drivers to optimal parking based on real-time vacancy and proximity data
- Integrated Nebula Labs API to compute parking predictions, combining occupancy and proximity variables into an optimized routing formula
- Architected a split Flask/Node.js backend integrating an LLM (Gemini AI) alongside ElevenLabs TTS, OpenWeather, and Google Maps APIs; deployed on Render

### Fit Finder AI

Feb 2025 – May 2025

- Developed a full-stack outfit recommendation web app using MongoDB, Express.js, React.js, and Node.js
- Implemented NLP to parse user prompts into clothing keywords and integrated APIs to fetch items and generate AI outfit images

### UTD Linux Club

Nov 2025 – Present

- Engineered a full-stack quantitative trading simulation platform for bracket-based financial contract trading using React/Next.js and Python calculation engines as part of the organization
- Developed REST API routes validating spending limits, applying market slippage, and computing dual-asset payouts with JSON state synchronization

### ClosetSensei

Sept 2025 – Nov 2025

- Built an AI-powered React Native mobile app using CV models (MobileNet, ResNet50) and recommendation algorithms (Cosine Similarity, KNN) to generate outfit suggestions from a virtual closet
- Integrated LangGraph RAG pipelines with OpenWeather and Google Calendar APIs for a conversational personal fashion advisor
