EDUCATION

University of Texas at Dallas

Bachelor of Science in Computer Science

Richardson, TX

Expected May 2028

– Relevant Coursework: Unix Systems Programming, Data Structures and Algorithms, Linear Algebra, Computer Science I & II

TECHNICAL SKILLS

Proficient: Python, JavaScript, TypeScript, React.js, Next.js, Node.js, Flask, FastAPI, REST APIs, LLMs, MongoDB, Firebase, Vercel, Claude Code, Codex

Experienced: C++, Java, Docker, AWS, Azure, Git, GitHub, Cursor, Copilot, TensorFlow, PyTorch, LangChain, LangGraph, RAG

Learning: SQL, PostgreSQL, Kafka, Vector DBs, Kubernetes, Ollama, React Native

EXPERIENCE

Dallas Formula Racing – SAE Software Division

Richardson, TX

Software Team Member

Jan 2025 – May 2025

- Automated the Star-stream data pipeline end-to-end by building REST API endpoints via Azure Functions to process real-time telemetry from racing cars stored in Azure Event Hubs
- Enabled direct race metric queries by implementing structured data formatting and transmission pipelines routing processed telemetry into MongoDB
- Shipped weekly deliverables on schedule by coordinating task timelines across a cross-functional software team using Agile methodologies; increased observability by integrating Loki for centralized logging

Bricks 4 Kidz

Shreveport, LA

Instructor

Summers 2022 – 2025

- Delivered STEM instruction to up to 20 students per session across 4 consecutive summers, introducing programming fundamentals through hands-on engineering builds and block-based coding languages
- Ensured on-time completion of all session builds by managing weekly lesson plans and communicating progress to parents across every cohort

PROJECTS

TokenGuard | *Node.js, WebSockets*

Jul 2026

- Eliminated undetected agent spirals by building a Node.js daemon that tracks live token usage from Codex session transcripts in real time, surfacing consumption data before budgets are exhausted
- Enforced hard session guardrails by shipping a Codex pre-tool plugin that denies further matching file-edit requests once a session is flagged, blocking spirals rather than only alerting on them
- Delivered sub-100ms dashboard updates by architecting a React frontend receiving live events from the daemon over WebSockets with full session detail and configurable thresholds

Callback | 1st Place at HackRice 16

Sep 2026

- Won 1st place in the Work & Productivity track at HackRice 16 by building an Electron app that runs live, voice-driven mock interviews scored against a candidate's résumé and a real job posting
- Delivered real-time behavioral feedback by building a webcam biometric pipeline (SmartSpectra/Presage SDK, MediaPipe) tracking pulse, stress, gaze, and posture alongside Gemini-scored interview answers
- Enabled long-term progress tracking by persisting session data in PostgreSQL/TimescaleDB, surfacing recurring weaknesses and trend charts across a candidate's interview history

Commut.r | 1st Place at HackAI 2026

Mar 2026

- Won 1st place at HackAI 2026 by building a voice-driven AI parking assistant guiding UTD commuters to optimal lots using real-time vacancy and proximity data in 24 hours
- Achieved natural voice response times by diagnosing a latency bottleneck mid-hackathon and refactoring to a split Flask/Node.js backend with a vacancy data caching layer
- Surfaced optimized recommendations by combining Nebula Labs occupancy, proximity, and weather signals through a linear regression routing formula

VectorFit | *React Native, PyTorch*

Sept – Nov 2025

- Automated wardrobe cataloging by building a React Native app with a live camera interface classifying items via a fine-tuned ResNet-50 CV model with custom preprocessing routines
- Generated contextual outfit recommendations via AWS Bedrock reasoning over weather and occasion data, with Lambda and S3 for serverless image processing; earned podium finish judged by engineers from multiple tech companies
